SUMMARY

Entry Level Backend Developer proficient in Django and Express.js, seeking to leverage programming skills to contribute to innovative projects. Completed projects utilizing Django and Express.js, demonstrating a solid foundation in backend development and problem-solving abilities. Eager to collaborate with a dynamic team to deliver efficient and scalable software solutions.

PROJECTS

Radar Transport Ticketing System

Group Project · May 2024 - Present

· Implemented logic for frontend and user authentication, built admin panel for tracking of user actions such as; tickets, available users, etc.
· Achieved 2nd place at in-house development competition.
· Developed a comprehensive Transport Ticketing System integrating React Native and Expo for the frontend, implementing secure user authentication, and creating an admin panel for monitoring user actions, resulting in achieving 2nd place at an in-house development competition.
· Contributed to the project webpage built in HTML and CSS, also to project backend written in Django to stabilize the project website, allowing users to download the beta APK for testing purposes during the competition.

SpendWise Expense Tracker

Personal Project · spendwise.pythonanywhere.com/ · August 2023 - September 2023

· Built backend in python and Django, added API integration through frontend and backend, hosted the project live at pythonanywhere.com.
· Personal project which included user authentication and login, with wallet creation, balance calculation with income and expense input records.
